Synopsis

A research methods text with a unique focus on evidence-based practice with couples and families, this book bridges the divide between research and clinical work. The text offers comprehensive, user-friendly coverage of measurement and design issues and basic qualitative and quantitative methods. Illustrating research concepts with clinically relevant examples and sample studies, it teaches clear steps for evaluating different types of studies and identifying common threats to validity. Of special value to therapists, it provides a systematic framework for using research to guide the selection and evaluation of interventions that meet the needs of particular clients. Pedagogical features: *End-of-chapter "Applications" sections showing how to evaluate specific methods. *Appendices with quick-reference guides and recommended resources. *Instructive glossary. See also the authors' *Essential Skills in Family Therapy, Third Edition: From the First Interview to Termination*, which addresses all aspects of real-world clinical practice, and *Essential Assessment Skills for Couple and Family Therapists*, which shows how to weave assessment into all phases of therapy.

Sort review

"Williams, Patterson, and Edwards have created a resource where none existed before--an accessible book about research for practitioners and students working with couples and families. The first part of the book provides a wonderfully succinct primer on research methods; the second part treads previously unexplored territory by offering an entrée into evidence-based practice. The volume guides readers to the essential information they need about research: what it is, how to find and appraise it, how best to incorporate evidence-based methods into practice, and how to evaluate clients' progress. This book should become the core research methods text for master's-level programs in marital and family therapy, counseling, and psychology."--Jay L. Lebow, PhD, ABPP, LMFT, Senior Scholar and Clinical Professor, The Family Institute at Northwestern University "Ideally suited for students and therapists invested in learning more about the research process in order to be optimally effective clinicians. This reader-friendly text, written by leaders in the marital and family therapy field, brings research to life in a way that is engaging, comprehensible, and clinically applicable. By mastering effective strategies for integrating state-of-the-art research into practice, clinicians at all stages of development will find their psychotherapeutic endeavors and outcomes enhanced enormously."--Nadine J. Kaslow, PhD, ABPP, Department of Psychiatry, Emory University; past president, American Psychological Association "A helpful and useful set of appendices are provided, in particular the Pocket Guide. I found the glossary especially helpful....By providing the information in a clear, logical, and methodical way the authors have opened a door for seasoned as well as new clinicians to apply evidence-based practice." — *Child and Family Behavior Therapy* Published On: 2017-01-18 "A user-friendly text that is ideal for MFT master's students. The writing is clear,

organized, and approachable with as many examples as there are key terms. Most importantly, this book does not teach students how to conduct research; rather, it teaches them how to critically consume it....This book is expressly written and best used for a master's level MFT research methods course. However, any clinician with an interest in connecting research to their practice could benefit directly from the text. My own students agree that this book is straightforward, informative, and directly applicable to their work as MFTs. Finding this book has restored much of the original joy I experienced at the opportunity to teach research methods." — Journal of Marital and Family Therapy Published On: 2016-04-01

"This book is already becoming a classic on research methods for marriage and family therapy students. In addition to providing students with basic research methods concepts, ethics, and some specifics of conducting research with couples and families, the authors do an excellent job of advocating for evidence-based practice as well as educating clinicians about evaluating and implementing research findings in practice. This is an excellent and much needed work on research methods for master's-level students in marriage and family therapy." — Doody's Review Service Published On: 2014-09-01

"The first section of the text is dedicated to research methodology infused with clinical applications. The authors remain consistently true to their intent to help the reader become an informed consumer of counseling research. The second section of the book builds a thoughtful understanding of evidence-based practice....The authors have included three helpful appendices, which summarize the steps of practice, the guide to evaluating research studies, and practice resources. They even provide a glossary of research 'lingo' to help the reader better understand the content without reference to another source."— The Family Journal Published On: 2015-07-21

About the Author Lee Williams, PhD, LMFT, is Professor in the Marital and Family Therapy Program at the University of San Diego. His research interests include family therapy training, marriage preparation, and couples with religious differences. Dr. Williams is coauthor (with JoEllen Patterson, Todd M. Edwards, et al.) of *Essential Skills in Family Therapy, Third Edition*, and *Essential Assessment Skills for Couple and Family Therapists*. JoEllen Patterson, PhD, LMFT, is Professor in the Marital and Family Therapy Program at the University of San Diego. She is also a voluntary Clinical Associate Professor in the Divisions of Family Medicine and Global Health as well as the Department of Psychiatry at the University of California, San Diego, School of Medicine. She serves on the editorial boards of *Families, Systems, and Health* and the *Journal of Marital and Family Therapy*. Dr. Patterson is coauthor (with Todd M. Edwards et al.) of *The Therapist's Guide to Psychopharmacology, Revised Edition*. Her Fulbright Scholarships have allowed her to work in Norway, New Zealand, Hong Kong, and elsewhere. Todd M. Edwards, PhD, LMFT, is Professor and Director of the Marital and Family Therapy Program at the University of San Diego, and provides individual and family therapy in the Division of Family Medicine at the University of California, San Diego, School of Medicine. His research and teaching interests focus on the integration of family-oriented mental health services into primary care settings; family therapy training; and male friendship in adulthood. He is Associate Editor of *Families, Systems, and Health*. --This text

What people say about this book

Kyle Olsen, "Required Reading for a college course, but enjoyable.. There was nothing really exceptional about the book. None of the information was new or different or surprising, it was a book I had to read for college. It does, however, provide itself as a separate individual resource for people looing into Family Therapy and any research methods (or, as the title suggests, foundationa of evidence-based practice)."

MadeleineB, "Good masters book. Great book for my masters class this semester !"

Kimberly K., "Good book but nothing was a surprise. Not sure what is special about this book in family therapy only the last few chapters focus on family therapy while 90% of the book is a review of statistics. Good book but nothing was a surprise."

Johnson, "Great book. When I heard the word "research" anxiety come up in me. This book doesn't give me anxiety. It makes research well worth reading."

Annie, "A book for class. Yes I needed this book for my class and yes it met my expectations."

Tamara Baker, "Surprisingly enjoyable (considering the topic!). Easy to digest and even an enjoyable read. These authors have made the understanding of research for the field of Marriage and Family Therapy achievable! Even for me :-)"

Linda Gibson, "I enjoyed this book - it is an easy read. I enjoyed this book - it is an easy read. The authors give examples of the concepts they are describing. I have taken a number of research courses - this was the best book."

Amer Haobsh, "Love it. Reading is Brain fuel"

Gabrielle Provencher, "Amazing book for clinicians to critically review research and studies Amazing book for clinicians to critically review research and studies in Family and Marital Therapy. Easy to read, great example and robust theorie."

Grygoriy Chorniy, "Five Stars. An excellent read in this area"
